About

Back-end focused software engineer with two years of hands-on experience designing event-driven microservices and developer tooling using Java, Spring Boot and Kafka. Passionate about clean architecture, automation and reducing operational overhead through scalable, well-engineered systems.

Experience

System Engineer, Tata Consultancy Services - Chennai Mar 2024 – Present

- Built an event-driven data reconciliation microservice leveraging Kafka and KSQL to automatically validate upstream data against MongoDB records, eliminating manual reconciliation and enabling automated alerting for discrepancies.
- Consolidated 60+ IBM ACE integration interfaces into a unified Spring Boot microservice, replacing per-interface codebases and images with Helm-templated environment variables and ConfigMap-rendered XSD/XSL files - eliminating new-codebase and new-image overhead per interface.
- Designed a centralized Gradle BOM and a convention plugin to abstract version management, configuration and build logic across 10 repositories containing 80+ microservices, cutting version upgrade effort by 60% and eliminating repeated per-service boilerplate.
- Created an AI agent using GitHub Copilot that generates Bruno API collections and automated tests from Swagger files, eliminating manual API collection authoring and enabling automated post-deployment validation in CI/CD.
- Eliminated CI/CD workflow duplication across 10 repositories by engineering reusable composite GitHub Actions and callable workflows with dynamic inputs and caching - cutting workflow code by 40% and build time by 30% across 150+ workflows.
- Optimized API performance by profiling MongoDB queries and restructuring the aggregation pipeline with targeted indexing, reducing response time by 70%.
- Introduced Testcontainers-based integration testing with production-mirrored environments, catching environment-specific bugs pre-release and improving deployment confidence.

Skill Set

Languages: Java, JavaScript, Typescript, Python

Frameworks: Spring Boot, Micronaut, Express JS, React JS

Databases: No SQL, MongoDB, Redis

Cloud & DevOps: Azure, Docker, Kubernetes (AKS), GitHub Actions CI/CD, Apigee

Messaging & Streaming: Kafka, Confluent, KSQL

Tools: Git, GitHub, Jira, Agile, GitHub Copilot, Claude, AI Agents

Education

SRM Easwari Engineering College, B.E. Mechanical Engineering

Aug 2019 - May 2023

Certifications

- | | |
|---|------|
| • GH 900: GitHub Foundations | 2026 |
| • AZ 500: Azure Security Engineer Associate | 2025 |
| • 100x Devs Full Stack Web Development Course | 2024 |
