About

Software engineer with two years of hands-on experience in back-end development. I am driven by a strong curiosity to learn, a focus on writing clean and reliable code, and a willingness to take on new challenges. I enjoy working in collaborative, fast-paced environments where I can contribute to building scalable and efficient systems.

Experience

System Engineer, Tata Consultancy Services – Chennai Mar 2024 – Present

- Developed an event-driven data reconciliation micro-service using that automated upstream data validation by implementing KSQL queries to cross-reference manifest counts with ingested messages and MongoDB records, eliminating manual reconciliation and enabling automated alerting for discrepancies.
- Designed and implemented a centralized Gradle BOM from scratch to standardize dependency versions across 40+ libraries for 80+ microservices, reducing inconsistent library versions and security vulnerabilities while cutting upgrade effort by 90% through single-file version changes and automated Dependabot pull requests.
- Identified workflow duplication across CI/CD pipelines and developed composite GitHub Actions to abstract common Gradle tasks, incorporating dynamic secret management and caching optimizations that reduced workflow code by 20% and build times across 100+ workflows in 8 repositories.
- Implemented automated API testing using Newman CLI with JSON schema validation against OpenAPI specifications, integrating tests into CI/CD workflows to validate response contracts and eliminate manual regression testing after deployments.
- Optimized API performance by profiling MongoDB queries and restructuring aggregation pipeline with targeted indexing, reducing response time by 70%.

Skill Set

Languages: Java, JavaScript, Typescript, Python

Frameworks: Spring Boot, Micronaut, Express JS, React JS

Databases: SQL, No SQL, MongoDB

Cloud & DevOps: Azure, Docker, Kubernetes (AKS), GitHub Actions, CI/CD, Apigee

Messaging & Streaming: Kafka, Confluent, KSQL

Project & Collaboration: Git, GitHub, Jira, Agile (Scrum)

AI Tools: GitHub Copilot, Chat GPT, AI Agents

Education

SRM Easwari Engineering College, B.E. Mechanical Engineering

Aug 2019 - May 2023

Certifications

- | | |
|---|------|
| • GH 900: GitHub Foundations | 2026 |
| • AZ 500: Azure Security Engineer Associate | 2025 |
| • 100x Devs Full Stack Web Development Course | 2024 |
